Education

Indian Institute of Information Technology, Senapati

2023 – 2027

Bachelor of Technology in Computer Science and Engineering

CGPA: 8.6 (Till 6th Sem)

RPS Public School, Naland

2021 – 2022

PCM

89%

Projects

PetPal – Pet Adoption & Pet Care Management Platform  | Live Demo

2026

React.js, Node.js, Express.js, PostgreSQL, Prisma ORM

- Developing a full-stack pet adoption platform that enables users to browse pets, submit adoption requests, and track the complete adoption workflow through role-based dashboards.
- Implementing secure authentication and authorization using JWT with separate access levels for adopters, shelters, and administrators.
- Building a comprehensive pet care module featuring vaccination tracking, feeding schedules, medication management and medical records.
- Designing RESTful APIs with Express.js and Prisma ORM for efficient data management using PostgreSQL.
- Following industry-standard practices including MVC architecture, responsive UI design, input validation, and scalable project structure.

Chest X-Ray Classification for Multi-Disease Detection

2026

- Designed and trained a custom 4-block CNN from scratch in PyTorch (~3.3M parameters) achieving 92% test accuracy on 4-class chest X-ray classification (COVID-19, Normal, Pneumonia, Tuberculosis), outperforming a fine-tuned ResNet50 baseline (89%).
- Engineered a 3-phase transfer learning pipeline for ResNet50 with class-weighted loss to address severe class imbalance (~700 TB vs 4,000+ Pneumonia samples), demonstrating practical handling of real-world data skew.
- Built model explainability into the pipeline using Grad-CAM heatmaps, validating clinically relevant activation regions – directly applicable to trustworthy, auditable AI system design.

OS Scheduling Simulator 

2026

- Implemented FCFS, SJF, SRTF, Round Robin, LJF, and LRTF CPU scheduling algorithms in C++, with a React.js frontend visualizing Gantt charts, waiting time, turnaround time, and CPU utilization in real time.
- Benchmarked all six algorithms on identical process sets to compare average waiting/turnaround time trade-offs – translating textbook OS theory into measurable performance data.

Technical Skills

Languages: C++, Python, JavaScript, SQL

Frameworks & Libraries: React.js, Node.js, PyTorch, TensorFlow/Keras

Databases: MySQL, MongoDB, PostgreSQL

Tools & Platforms: Git, Postman, Linux, Vercel, Google Colab

Concepts: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks, Compiler Design

Achievements

- 1st Place, Code Hunt Competition, College Tech Fest – competitive coding under time pressure.
- NPTEL Gold Certification – Business Intelligence and Analytics.
- NPTEL Silver Certification – Introduction to Information Retrieval.
- **Problem Solving:** 300 DSA problems solved across Array, String, Stack, Recursion, Queue, Linked List, Tree, DP. (LeetCode)
